

Repair and restore your skin to an age-resistant beauty level!

As a person ages, their collagen production begins to decline which leads to the breakdown of the skin's underlying support structure. Daily exposure to UV rays and other environmental elements can cause the skin to become discolored and premature wrinkles may emerge. Treatments with the Matrix Fractional CO² laser will enhance the skin's strength and elasticity. The skin will have a smoother, tighter texture and pigmentation problems will begin to diminish.

Matrix Fractional CO² laser treatments provide wrinkle reduction, overall tissue tightening and textural improvement.

- Sun Damage

The Matrix Fractional CO² laser system by:
Sandstone Medical Technologies

The Matrix Fractional CO² laser system is recognized by patients and medical professionals as the laser of choice for outstanding treatment results.

How Sandstone's Fractional Technology Works

The high speed UltraFine Fractional Scanner will direct a grid pattern of tiny pulses of light at the skin. Each pulse delivers a column of energy that can reach the skin's dermal layer. This stimulates a natural renewal process of the body's own collagen. Also, because the laser beam has been fractionized, small areas of untreated skin will be left between the treated spots. By strategically performing the procedure in this way, the healing process is accelerated.

Treatment Outcome Desires

The Matrix Fractional CO² technology is designed in such a way that the treating technician has precise control over the intensity of the treatment. Each individual treatment can be tailored to a specific need and allotted downtime. Consult your physician to discuss the possible benefits and results associated with the Matrix Fractional CO² laser system.

Matrix² Fractional CO²

Is fractional resurfacing right for me?

Fractional skin resurfacing is a safe and effective procedure for almost any skin type. Fractional resurfacing can be applied to most areas of the body. Consult your physician to see if fractional resurfacing is right for you.

Extensive Sun Damage

How long will my treatment take?

The Matrix Fractional CO² treatment usually takes less than 30 minutes.

What does the laser treatment feel like?

Treatment sensations vary from person to person. As tiny pulses of energy are delivered into the skin, most patients will experience a warm sharp feeling and an immediate tightening of the skin. Most patients look and feel like they have a mild sunburn for a few days after the treatment. Anesthetic ointments and cooling devices may be used to reduce any discomfort during and after the procedure.

How will I take care of my skin after treatment?

Depending on the desired outcome, post-treatment care will vary from patient to patient. Most patients that have a full facial skin rejuvenation treatment will need to stay indoors for a few days while applying a topical ointment as directed by the physician.

How much does the treatment cost?

Costs will vary depending on your skin condition and overall treatment requirements. Schedule a consultation today for more details.
